PASSION

I am deeply passionate about leveraging my technical expertise to drive innovative solutions. With a strong foundation in OOPs, full stack development, AI ML, and DSA, I am eager to optimize processes and contribute to cutting-edge technology projects. My commitment to continuous learning and passion inspires me to develop impactful, data-driven strategies within a dynamic environment.

EDUCATION

Degree/Course	University / Board	Year	CGPA/Percentage
B.Tech (Computer Science and Engineering)	PES University (Bengaluru, Karnataka, India)	September 2022-Present	7.74
High School	Homestead High School (Cupertino, CA, USA)	August 2018-June 2022	91.7%

SKILLS

- **Programming Languages:** Java (proficient), Python (proficient), C (proficient), SQL (proficient), C++ (intermediate), C# (beginner), Rust (beginner)
- **Machine Learning**
- **DSA and DAA**
- **Full Stack:** JavaScript, TypeScript, React, Next, Node.js, Express.js
- **Database Management:** MySQL, MongoDB

PROJECTS

[Osteoporosis Detector Using Explainable AI](#)

- Created a multimodal pipeline AI tool which can determine the stage of osteoporosis based on hip x-ray scans by classifying its Singh Index and explains the classification to the user via explainable AI models
- User Interface implementation using Streamlit, so the project is deployable
- Can be used by people to determine stage of osteoporosis before visiting the doctor and by med students to learn how to classify stages of osteoporosis via Singh Index

[Legal AEye-Opener](#)

- Created a legal AI advisor which utilizes LLMs and RAG
- User can query a grievance, and the model will provide the user with legal procedures and accompanying laws from the Bharatiya Nyaya Sanhita legal code
- Has front end implementation for user I/O and a chat history to help remember and build context for further queries regarding the user's grievance

[Treasure \(PESU Venture Labs\)](#)

- Created an SaaS platform with a robust, scalable frontend and backend with support and funding from PESU Venture Labs
- Implements MongoDB for database management, Node, Express, Next for frontend backend, and multi-agentic AI workflows for ease of use of our platform

[GameServerAPI](#)

- Created a full stack project centered around a flappy bird game developed on Unity using C#
- Implemented a hostable web API to display a user's achievements and score from the game
- Stored the user's information on phpMyAdmin SQL server
- Uses PHP scripting to access the database and retrieve info to be displayed on the hosted web

[VehicleRentalSystem](#)

- Created a vehicle rental system using Java
- Utilizes JDBC to store rental information on an SQL server
- Provides a GUI interface unique to the type of user logged in to interact with the rental system to rent vehicles as a customer or add vehicles as an admin

ACHIEVEMENTS

- Awarded with the Distinction Certificate for having secured an SGPA of 7.75 and above in the Department of Computer Science and Engineering at PES in both my first and third year

PUBLICATIONS

- "Multimodal Weighted-Fusion Framework for Transparent Osteoporosis Screening"
